

Decision Log

Version: 1.0

Purpose

This document records all significant architectural, technical and organizational decisions made throughout the development of Trading Platform Pro.

The goal is to preserve decision history, rationale and consequences for future developers and AI agents.

Decision Principles

Every major decision should be:

- documented
- justified
- reviewable
- traceable
- version controlled

Decision Record Template

Each decision should contain:

Identifier

```

DEC-0001

```

Title

Short descriptive title.

Date

YYYY-MM-DD

Status

- Proposed
- Accepted
- Superseded
- Deprecated

Context

Describe the problem or requirement.

Decision

Describe the chosen solution.

Alternatives Considered

List the evaluated alternatives.

Consequences

Positive:

-

Negative:

-

Decision Index

ID	Title	Status
DEC-0001	Clean Architecture	Accepted
DEC-0002	Domain-Driven Design	Accepted
DEC-0003	Dependency Injection	Accepted
DEC-0004	Event-Driven Architecture	Accepted
DEC-0005	Python 3.13	Accepted
DEC-0006	Ruff as Formatter and Linter	Accepted
DEC-0007	GitHub Actions for CI	Accepted

Maintenance

The Decision Log should be updated whenever:

- a major architectural decision is made
- a technology is replaced
- a significant design direction changes
- an accepted decision becomes obsolete

Minor implementation details should not be recorded here.

Decision Governance

Architecture and product decisions shall:

- be documented before implementation where practical
- include rationale
- identify affected components
- reference related ADRs when applicable

Decision Review Checklist

Before accepting a decision verify:

- problem clearly defined
- alternatives evaluated
- consequences documented
- architecture preserved
- documentation updated
- roadmap impact assessed
