

Project Overview

Project: Trading Platform Pro
Application: Trading Cockpit
Version: 1.0
Status: Active

Purpose

Trading Platform Pro is an enterprise-grade software platform for building, operating and evolving professional trading applications.

The first application developed on this platform is the **Trading Cockpit**.

The Trading Cockpit provides an integrated workspace for market analysis, decision support, trade planning, execution, portfolio management and risk monitoring.

The platform is designed to support future applications without requiring architectural redesign.

Vision

Create a modular, scalable and maintainable trading platform that combines professional software engineering with modern trading workflows.

The platform shall provide a common foundation for multiple trading applications while maintaining a consistent user experience, architecture and development model.

Product Scope

The initial release focuses on the Trading Cockpit.

Core capabilities include:

- Market Monitoring
- Decision Center
- Watchlists
- Portfolio Management
- Position Monitoring
- Order Management
- Risk Management
- Reporting & Analytics
- Workspace Management
- Command Palette

Platform Principles

The platform follows these principles:

- Clean Architecture
- Domain-Driven Design (DDD)
- Event-Driven Architecture
- Modular Design
- SOLID Principles
- Dependency Injection
- Testability
- Extensibility
- Security by Design

Target Users

The platform is intended for:

- Professional traders

- Active private traders
 - Quantitative traders
 - Developers extending the platform
 - Future AI-assisted trading workflows
-

Project Goals

The primary goals are:

- Modular architecture
 - High maintainability
 - Deterministic behaviour
 - High software quality
 - Professional user experience
 - Scalable platform architecture
 - Comprehensive documentation
-

Out of Scope

The current project does not aim to provide:

- Automated strategy optimisation
- High-frequency trading
- Social trading
- Broker-specific custom solutions
- Cloud-native deployment

These capabilities may be added in future platform releases.

Architecture

Trading Platform Pro consists of:

- Core Platform
- Shared Services
- Trading Cockpit
- Future Applications

The software architecture is documented separately in the Software Architecture Document (SAD).

Documentation

Project documentation is organised by domain.

Key documents include:

- Product Vision
 - Project Charter
 - Trading Cockpit Specification (TCS)
 - Software Architecture Document (SAD)
 - API Specification
 - Widget Catalog
 - Operations Manual
 - Developer Documentation
-

Repository

The repository follows a domain-oriented structure separating product, architecture, implementation and operational documentation.

Source code, documentation, configuration and tests are maintained independently.

Future Applications

The platform is designed to support additional applications including:

- Portfolio Manager
- Market Scanner
- Strategy Lab
- Reporting
- Automation Services

without changing the underlying platform architecture.
