

Roadmap

Version: 1.0

Purpose

This document describes the strategic evolution of Trading Platform Pro.

Unlike the Product Roadmap, this roadmap focuses on technical implementation priorities, architectural evolution and engineering milestones.

Current Status

The project is currently establishing its technical foundation.

Completed areas include:

- Repository structure
- Documentation framework
- Clean Architecture
- Dependency Injection
- Configuration system
- Logging infrastructure
- Event Store
- Messaging
- Runtime foundation
- CI/CD
- Development standards

Phase 1 – Foundation

Status: ****In Progress****

Objectives:

- Complete infrastructure services
- Standardize documentation
- Finalize development workflow
- Increase automated test coverage
- Stabilize architecture

Phase 2 – Platform Services

Objectives:

- Runtime Management
- Scheduler
- Plugin System
- Resource Management
- Monitoring
- Health Checks
- Transaction Handling
- Security

Phase 3 – Trading Platform

Objectives:

- Market Data
- Order Management
- Portfolio Management
- Position Management

- Risk Management
- Broker Integration

Phase 4 – Trading Cockpit

Objectives:

- Dashboard
- Workspace Management
- Watchlists
- Scanner
- Charts
- Decision Center
- Notifications
- Command Palette

Phase 5 – Strategy Platform

Objectives:

- Strategy Engine
- Signal Processing
- Backtesting
- Paper Trading
- Optimization
- Automation

Phase 6 – Analytics

Objectives:

- Reporting
- Performance Analysis
- Trading Journal
- Risk Analytics
- Statistics
- AI-assisted Insights

Phase 7 – Ecosystem

Objectives:

- Public APIs
- Plugin SDK
- Extensions
- Import / Export
- Cloud Readiness

Continuous Activities

The following tasks continue throughout every phase:

- Refactoring
- Documentation
- Testing
- Performance Optimization
- Security Improvements
- Dependency Updates
- Technical Debt Reduction

Success Criteria

The roadmap is considered successful when:

- Architecture remains consistent.
- Documentation stays synchronized.
- Test coverage continuously improves.
- Technical debt remains controlled.
- Features integrate without architectural degradation.

Governance

The technical roadmap shall:

- align with the Product Roadmap
- preserve architectural consistency
- minimize technical debt
- remain reviewable
- be updated after major milestones

Roadmap Review Checklist

Before starting a new roadmap phase verify:

- previous objectives completed
- dependencies resolved
- architecture validated
- documentation synchronized
- quality goals achieved
- implementation priorities confirmed
